Advanced Audio Coding (AAC) is a digital audio standard developed by Apple Inc., which was subsequently licensed to other companies. The file format is currently the most widespread audio format in the Apple iTunes Store and is open standard compliant. AAC was selected as the standard for the iTunes Store, containing media from the iTunes Music Store, because it was the most advanced codec available at the time, and because its "lossy" encoding and "lossless" decoding properties make it ideal for delivering high fidelity, low bitrate MP3 files. Advanced Streaming Format (ASF) is a format developed by Microsoft, and has been a de-facto standard for streaming multimedia since the release of Windows Media Player in 2003. Microsoft developed it initially as a file format for transferring streaming video and audio in Windows Media Video versions 7 and 8, and has since been enhancing it and using it in various streaming related applications. ASF was released as an MPEG-4 Part 14 implementation and an ISO base media file format for media distribution. Microsoft uses the ASF format to stream Windows Media Player and Windows Media Center, and also uses the format for their own WMV container (Windows Media Video 9) and for the Redmond.tv internet television service. An AVI is a container format that is mainly used to store video and audio data stored as bitmap graphics, with video encoded in one or more of the MPEG-1, MPEG-2, MPEG-4, DivX and XviD video compression standards. The AVI container format was developed by Microsoft, who also developed a player for the AVI file format. Both the container and the player are part of Microsoft Windows media technologies, and are available as a part of Windows Media player, Windows Media Center, Windows Media Encoder, Windows Media Server, and Windows Live. DivX is an open-source cross-platform multimedia container format developed by DivX, Inc. for its DivX encoded video stream, in which the audio and video components are embedded. DivX is mainly used for broadcasting, DVD-Video and Blue-ray video playback and archiving. It is freely available for non-commercial use. It is becoming increasingly popular because of its use in video streaming. The DivX standard can also be found in the ISO/IEC 14496-12 standard. The MPEG-1 standard consists of
